

Somerset Communities Recognized by goDCgo for Leadership in Sustainable Transportation

Somerset Development Company announces that several of our Washington, DC communities were recently recognized through the goDCgo Transportation All-Star program, an initiative that honors organizations committed to advancing sustainable transportation and improving access to mobility options across the District.

The awards were presented during goDCgo's 10th Annual Transportation All-Stars Award Ceremony, held on May 6, 2026, at the Martin Luther King Jr. Memorial Library. The milestone event celebrated employers, schools, residential properties, and community partners who are helping create a more accessible, equitable, and environmentally sustainable transportation future for Washington, DC.

Somerset communities recognized through the program include:

- **The Faircliff – Platinum Designation**
- **Hubbard Place Apartments – Gold Designation**
- **Faircliff Plaza West – Silver Designation**

In addition to receiving Platinum status, The Faircliff was also honored with goDCgo's **Outstanding Transportation Amenity Award**, recognizing the property's exceptional integration of sustainability, transportation accessibility, and resident-centered design.

As one of the greenest multifamily affordable housing developments in Washington, DC, The Faircliff incorporates features such as real-time transit displays, bicycle storage, EV charging stations, unbundled parking, and LEED Platinum and Passive House design standards. The property was specifically recognized for seamlessly integrating transportation into daily resident life while ensuring residents can fully access and benefit from available transit resources through hands-on support and accessible resident services.

These recognitions reflect Somerset's broader mission of creating communities that are not only affordable, but also connected, healthy, and environmentally responsible.

The goDCgo Transportation All-Star program recognizes organizations that support sustainable commuting options and help advance the District's climate and livability goals by reducing reliance on single-occupancy vehicles and encouraging alternative transportation choices.

"We are honored to see our communities recognized through this program," said Somerset Development Company. "Transportation access is deeply connected to quality of life, economic opportunity, and environmental sustainability. These recognitions reflect the thoughtful work of our development, property management, and resident services teams, as well as the residents and partners who help make our communities vibrant and connected."

Somerset looks forward to continuing to expand transportation access and sustainability initiatives across its portfolio in partnership with residents, community organizations, and public agencies.
